

AMENDMENTS TO THE CLAIMS

Please amend the Claims as follows:

1. (Currently Amended) A disposable lancet device for piercing human skin comprising:
 - a lancet housing;
 - a lancet body displaceably supported by the housing and having a piercing tip which is concealed within the housing in a rest position of the body;
 - an operator ~~engaged~~ integral with or connected to the lancet body for manually displacing the lancet body to expose the piercing tip; and
 - a return against which the lancet body operates as it is manually displaced to expose the piercing tip whereby the return automatically retracts the lancet body to its rest position when the manual displacement force is removed from the operator wherein the operator is ~~adapted to be disengaged~~ readily manually separable from the lancet body after use to prevent subsequent manual displacement of the lancet body from its rest position.
2. (Previously Presented) The disposable lancet device of claim 1, wherein manual force applied to the operator is translated to the lancet body for displacing the lancet body from its rest position.
3. (Previously Presented) The disposable lancet device of claim 1, wherein the return holds the lancet body in its rest position.
4. (Previously Presented) The disposable lancet device of claim 1, wherein the return comprises at least one resilient projection extending from the lancet body, wherein the resilient projection is deformed by a portion of the housing when the lancet body is displaced from its rest position.
5. (Previously Presented) The disposable lancet device of claim 1, wherein the return comprises at least one resilient projection extending from the housing, wherein the resilient projection is deformed by a portion of the lancet body when the lancet body is displaced from its rest position.
6. (Previously Presented) The disposable lancet device of claim 1, wherein the return comprises a coil spring.
7. (Previously Presented) The disposable lancet device of claim 1, wherein the

Appl. No. : **10/009,946**
Filed : **December 10, 2001**

lancet body is supported for linear displacement by the housing.

8. (Previously Presented) The disposable lancet device of claim 1, wherein the operator is disposed on the axis of displacement of the lancet body.

9. (Previously Presented) The disposable lancet device of claim 1, wherein the lancet body, operating means and piercing tip form a generally elongate member.

10. (Previously Presented) The disposable lancet device of claim 1, wherein the lancet body is non-linearly displaceable.

11. (Previously Presented) The disposable lancet device of claim 10, wherein the operator projects from the housing to one side of the lancet body.

12. (Previously Presented) The disposable lancet device of claim 1, wherein the operator is integrally moulded with the lancet body.

13. (Previously Presented) The disposable lancet device of claim 12, wherein the operator is breakable from the lancet body at a line of weakness at or adjacent the juncture of the lancet body with the housing when the lancet body is in its rest position.

14. (Previously Presented) The disposable lancet device of claim 1, wherein the operator is connected to the lancet body by a connection device.

15. (Previously Presented) The disposable lancet device of claim 14, wherein the connection device is a snap engaging connection or screw thread.

16. (Previously Presented) The disposable lancet device of claim 1, wherein the piercing tip is secured to the lancet body.

17. (Previously Presented) The disposable lancet device of claim 1, wherein the piercing tip is integral with the lancet body.

18. (Previously Presented) The disposable lancet device of claim 16, wherein the lancet body is moulded around a mounting portion of the tip.

19. (Previously Presented) The disposable lancet device of claim 1, wherein the piercing tip and lancet body are moulded from the same or different plastics material selected from polycarbonate, polystyrene, and polypropylene.

20. (Previously Presented) The disposable lancet device of claim 18, wherein the piercing tip is formed of metal.

21. (Previously Presented) The disposable lancet device of claim 1, wherein the piercing tip has a cylindrical body tapering to a pointed end.

Appl. No. : **10/009,946**
Filed : **December 10, 2001**

22. (Previously Presented) The disposable lancet device of claim 1, wherein the piercing tip is multi-sided.

23. (Previously Presented) The disposable lancet device of claim 22, wherein the tip is pyramidal or flat with sharp leading edges.

24. (Previously Presented) The disposable lancet device of Claim 20, wherein the metal comprises stainless steel.

25. (Previously Presented) A multi-use, safety lancet device comprising:

a lancet housing of a first length;

a lancet body displacably positioned within the lancet housing;

a piercing tip attached to a first end of the lancet body such that the piercing tip and lancet body together are of a second length less than the first length;

a return biasing the lancet body and piercing tip to a concealed position wherein the lancet housing covers the piercing tip; and

an actuator operating the lancet body between the concealed and an operational positions wherein the piercing tip is exposed and wherein the actuator can repeatedly change between the concealed and operational positions and wherein the actuator is also disableable so as to inhibit further achievement of the operational position.

26. (Previously Presented) The device of Claim 25, wherein the piercing tip and the lancet body are an integral part.

27. (Previously Presented) The device of Claim 25, wherein the actuator is attached to the second end of the lancet body opposite the piercing tip such that the actuator, lancet body, and piercing tip together form a lancet assembly having a third length greater than the first length.

28. (Previously Presented) The device of Claim 25, wherein the actuator is removably attached to the lancet body.

29. (Previously Presented) The device of Claim 28, wherein the actuator and lancet body are an integral part and the removable attachment of the actuator to the lancet body comprises a pre-formed weakened region disposed between the actuator and the lancet body.

30. (Previously Presented) The device of Claim 25, wherein the return comprises resilient structure formed in at least one of the lancet housing and the lancet body.
